WANDUSOA QUARTERLY: ISSUE 01

QUARTER 1, 2026

REGENERATIVE NEWS

“Healing land, empowering youth, and building the green economy of tomorrow.”

A Message from our Founder:

The Social Soil of Change

Dear Friends and Partners,
Two years ago, I stood on the kanthari stage in India with a dream: a Cameroon where rural youth are the primary architects of climate resilience. Today, looking at our progress in early 2026, that dream has taken deep root in the soil of Mfou.

We have faced shifting seasons and early rains, but as we often say in our circles, "If we take care of the soil, the soil will take care of us." This quarter has been about more than just farming; it has been about proving that regenerative agriculture is a powerful engine for both environmental healing and economic dignity.

Thank you for being the "social soil" that allows our mission to flourish.

Kuta Cornelius
Founder & Executive Director

Q1 IMPACT HIGHLIGHTS

1. The "Soil to Sale" Milestone at GBHS Mfou

This month, Wandusoa transformed from a theoretical pilot into a revenue-generating enterprise. Our 20 scholars—including 12 internally displaced girls—achieved a landmark 100% market sell-through.

- The Smart Pivot: By analyzing local demand, our scholars pivoted from 1kg bundles to 250 XAF "Mini-Bundles," doubling our customer base and generating 75,000 XAF in net profit.
- The Digital Edge: Scholars are now finalizing business plans via the Enterprise Adventure App, merging traditional permaculture with 21st-century digital entrepreneurship.

2. Global Voice: UNCCD

Accreditation

Wandusoa has been officially granted provisional accreditation as an Observer to the United Nations Convention to Combat Desertification (UNCCD). This milestone ensures that the voices of Cameroonian grassroots farmers will be represented on the global stage at COP17 in Mongolia this August.

3. Breaking Ground:

The Ecological Training Centre

In collaboration with Journeyman International and architect Cédric Delbeke, we have unveiled the final designs for our permanent campus. Built from the very earth we heal, this center will be the heart of our "Soil to Software" scale-up.

STRATEGIC GROWTH & PARTNERSHIPS

- RELUFA Partnership: We have forged a strategic alliance with RELUFA (Réseau de Lutte contre la Faim au Cameroun). Through June 2026, we are hosting their team for an immersive "Learning by Doing" residency in soil restoration and food justice.
- Impact Dashboard: We are launching an 80-hour Tech Sprint with F5 to build a digital dashboard for tracking carbon sequestration and student growth metrics.

VOICES FROM THE FIELD

"I used to think my world had become very small because of the things I lost... but now I feel like I am standing on a big stage. I am not just growing spinach; I am designing a business that the whole world can see." — Maliki, Wandusoa Scholar

HOW YOU CAN SUPPORT OUR GROWTH

As we prepare for our formal graduation ceremony in late April, we invite you to join us:

- SEED A SCHOLAR: Every gift provides tools, seeds, and digital access for displaced youth: https://www.globalgiving.org/projects/revitalize-and-protect-top-soil-cameroon/
- FOLLOW THE JOURNEY: Stay updated on our restoration via our LinkedIn :
- PARTNER WITH US: We are seeking collaborators for our upcoming "Reforestation Sprint."
